### 3 Watt Modules

12" on center distance and 155 degree angle allows for uniform light distribution throughout the sign surface.

#### Simplicity

Allanson's powerful 3 watt Storm Tight #ACLW-CW-3W led module can be attached to both sides of 1"x1" square aluminum tube frame and spaced 12" on center for double face applications. 3 watt module can be attached directly to backer for single face applications.

#### Retro Double Face Sign

Remove existing high output lamps and sockets. Use existing D-punch holes to run new led wires. Remove lamps, and cut to size 1"x1" square aluminum tube frame and fasten in front of existing D-Punch hole using a Tee Support Bracket. Attach led's to both sides of 1"x1" square tubing. Snake wires thru existing raceways and make connection to power supply.

#### New Double Face Sign

Instructions are the same as Retro, other than the fabricator must drill or punch a hole large enough for 2 wires to run into a new un-punched raceway.

#### Retro or New Double Face Sign

Space and attach the 3 watt Storm Tight LED's 12" on center to backer of sign.

Bushings are recommended to be used with holes in raceways to prevent wire chafing.
